

VOLVO
S80
EXECUTIVE

VOLVO

A true executive car, combining world-famous impact protection with outstanding ride comfort and driving characteristics. With an exclusive interior that puts the passengers first - and space for relaxed travel or efficient work.

Volvo's personal security system and the possibility of comprehensive armour add new dimensions to safety. Savour the new Volvo S80 Executive, a Swedish revolution in executive transportation.

Light, airy and breathing a sense of care and consideration, the passenger compartment is among the most spacious in its class.

The specially-designed rear seat has two exclusive armchairs in the finest English leather. Extra padding, electric cushion and backrest heating, and extended legroom all contribute to the first-class feeling of comfort.

The exclusive centre console contains a power outlet for a pocket phone or portable PC, cup holders, ashtray and controls for the seat heaters and rear sun curtain, as well as provision for installing a TV/Video monitor.

The multi-functional armrest has space for various options such as a built-in refrigerator, fax and DVD player.

STANDARD EQUIPMENT
(varies by market)

- Added legroom for rear seat passengers
- Extended door openings
- Upgraded leather upholstery (Arena or Offblack)
- Increased seat comfort
- Heated rear seats
- Multi-functional armrest
- Luxury mid-console
- Cup holders, front and rear
- Rear ashtray
- Power outlet
- Electric rear-window sun curtain
- Additional storage compartments

OPTIONAL EQUIPMENT
(varies by market)

- Manual side-window sun curtains
- Refrigerator
- TV/Video monitor with remote control
- DVD player
- Fax machine
- Tinted glass
- Laminated side windows
- Integrated hands-free GSM with extra handset
- RTI with TV
- Light or full armour

For more detailed specifications, please contact your local Volvo dealer.

The manufacturer reserves the right to modify design and equipment without prior notification.

The extra handset is integrated in the front centre armrest, within easy reach of everybody in the car.

The Volvo S80 Executive includes provision for the latest in communications equipment. These options have been specially developed for the Volvo S80 and have been tested to meet Volvo's exacting requirements in terms of quality and safety. They have even been crash-tested in place in the car.

Integrated GSM-telephone

The integrated GSM telephone has an extra handset in the front centre armrest so that rear-seat passengers can make and receive calls. The driver can use either the integrated telephone controls in the steering wheel or the keypad in the centre console. The high power output means that you can talk without disruption even in poor conditions.

RTI navigation

Volvo's RTI road and traffic information system helps the driver to find the fastest route to the destination and avoid tailbacks and other traffic obstructions. It can also show you the way to the nearest hotel, petrol station,

parking lot or restaurant. A voice tells you when and which way to turn. The display in the centre of the dashboard indicates the car's present position and which direction the driver should take.

A television for terrestrial channels can be added to RTI - to help the chauffeur pass the time when the car is at a standstill (PAL or NTSC colour systems).

Integrated audio system

Our most advanced audio system has nine high-performance loudspeakers, separate 4 x 50 W amplifiers and built-in Dolby Surround Pro Logic System*. This gives an audio experience that is unique in the automotive world, allow-

ing you to enjoy the music as if you were sitting in a concert hall. The RDS radio is integrated in the dashboard and can be operated by the driver without letting go of the steering wheel. It can also be operated from the rear seat using a separate remote controller. You can listen to your favourite music with the built-in CD changer, which can take four discs. One of the world's smallest 10CD changers can also be added.

Dolby and Pro Logic are trademarks of the Dolby Laboratories Licensing Corporation.

Navigation screen displaying a map with a blue route.

Two air vents with a red hazard light button in between.

VOLVO HU-801

The Volvo S80 Executive includes a comprehensive system of personal security options, with armour that gives new dimensions to safety. In addition to Volvo's world-famous crash safety, everybody in the car can enjoy effective protection against most types of assault. Two levels of armour are available - light and full - in order to meet the majority of security needs.

Personal security systems

Even without armour, the Volvo S80 Executive already offers comprehensive personal safeguards, with electronic immobilisers, rotating lock cylinders and remote-controlled alarm with level and movement sensors.

Approach/home-safe lighting illuminates your path to and from the car at night for half a minute. The shatter-proof windows provide extra protection from assaults on the car.

Light armour

The light-armour Volvo S80 Executive provides the occupants with good protection against light handguns (European B4).

The body sides, luggage compartment wall, roof and half of the bonnet are armoured with a very light and extremely strong composite material. In certain places this is reinforced with steel. The 21 mm polycarbonate-laminated windows can retard a bullet fired at close range from a light handgun. On the driver and passenger sides, the windows can be wound down about 7 cm.

In order to compensate for the 200 kg weight increase, the chassis is reinforced with stronger springs and shock absorbers. It has also been raised about 20 mm for improved ground clearance.

Full armour

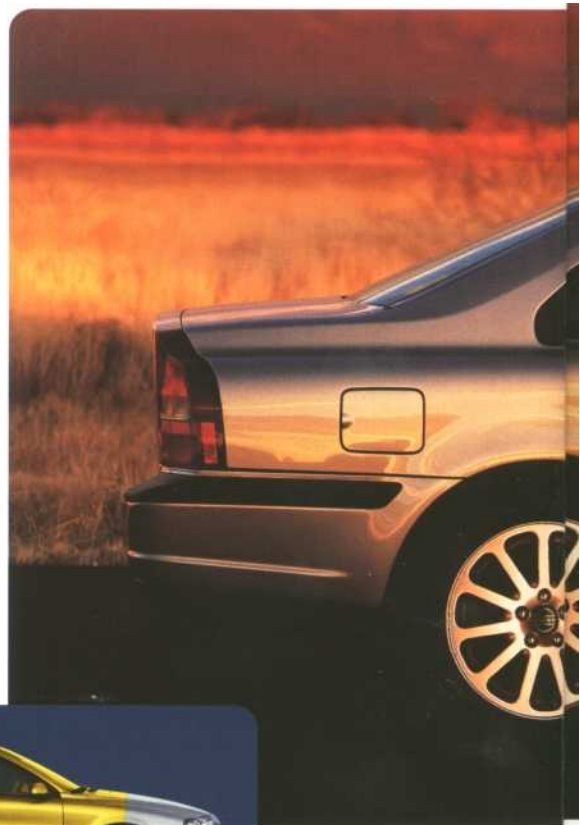

The armour is adapted to your own personal requirements. The full armour provides protection against attack with high-calibre weapons (up to European B6+).

Volvo's most comprehensive armour means that the entire passenger compartment is surrounded by a protective

shell. The body sides, luggage compartment wall, propeller shaft wall and roof are enclosed in armoured steel and composite material. All the windows are 46 mm thick, with polycarbonate lamination. The floor is fully armoured to provide protection against hand grenades.

Options for armoured versions

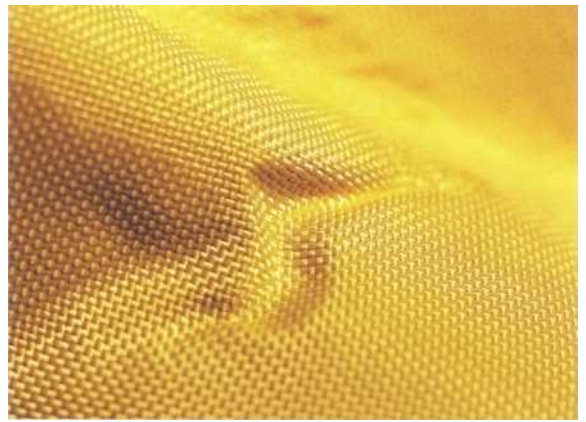

With a two-way communication unit, you can talk to people just outside the car. A siren can be fitted in the grille so that you can attract attention in an emergency. You can also add run-flat tyres, a fire extinguisher for engine and fuel tank and an emergency exit, smoke generator and oxygen masks.

Despite the comprehensive safeguards, a Volvo S80 Executive with light armour weighs just 200 kg more than the standard version. The armour is so discreet, moreover, that it is invisible - both from the outside and the inside.
