Notes

- (i) For best performance and lowest fuel consumption 98 RON is recommended. 95 RON can be used for normal driving.
- (ii) The results do not express or imply any guarantee of the fuel consumption of a particular car.
- (iii) Official fuel consumption figures are obtained in accordance with Directive 93/116/EC as amended by 1999/100/EC. The figures are obtained under controlled test conditions and as such consumption achieved on the road will not necessarily accord with the official test results. Factors including driving styles and road, car and weather conditions will also have a bearing on actual fuel consumption achieved.
- (iv) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 750 kg.

The weight of the vehicle will influence the level of CO_2 emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO_2 . Once a vehicle has been built it will be given its own specific CO_2 emission on which the Vehicle Excise Duty will be charged. A weighbridge must be used to determine specific weights.

Data valid for manual transmission unless specified. All measurements in mm. The Max. output figures are quoted in PS (Pferdestärke), which is the metric equivalent of brake horsepower. NB Some of the information in this price list may not be correct due to product changes which may have occurred since it was printed. Some of the equipment described or shown may now be available only at extra cost. Before ordering, please ask your Volvo dealer for the latest information.
