

THE ALL-NEW VOLVO XC70 PRICING

THE ALL-NEW VOLVO XC70

Built to take you further and keep you safer, this all-new Volvo XC70 copes with anything that passes for road and improves the ride on anything that doesn't. Improvements include the world's first dual-stage integrated child booster seats, laminated glass available all round (a first), weight-adjusted force-limiter safety belts (because people are not all the same weight), and powerful 6 cylinder engines for the first time in a Volvo XC70.

D5

The D5 2.4 litre, turbocharged, in-line, 5 cylinder, common rail diesel engine delivers very low fuel consumption and CO2 emissions with excellent performance – producing 185 PS and 400 Nm torque. This advanced design combined with third-generation electronic common rail fuel injection, variable blade turbocharger and a diesel particulate filter makes it one of the cleanest and most advanced diesel engines available on the market.

AWD WITH INSTANT TRACTION™

The electronically controlled AWD (All Wheel Drive) system with Instant Traction™ automatically distributes drive between the front and rear wheels within a fraction of a second as conditions demand. This intelligent system optimises traction and stability in all conditions and aids fuel consumption.

- (i) For best performance and lowest fuel consumption 98 RON is recommended. 95 RON can be used for normal driving.
- (ii) These results do not express or imply any guarantee of the fuel consumption of a particular car as there are inevitable differences between individual cars of the same model. Additionally driving style, traffic conditions, as well as the age and mileage and standard of maintenance will affect a car's fuel consumption.
- (iii) The Urban fuel consumption figure is based on typical city driving, including starting the car from cold. The Extra Urban figure is based on typical motorway driving and cruising. The Combined figure averages the consumption across both cycles.
- (iv) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 750 kg.

Notes
The weight of the vehicle will influence the level of CO₂ emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO₂. Once a vehicle has been built it will be given its own specific CO₂ emission on which the Vehicle Excise Duty will be charged.
A weighbridge must be used to determine specific weights.
Data valid for manual transmission unless specified.
All measurements in mm.
The Max. output figures are quoted in PS (Pferdestärke), which is the metric equivalent of brake horsepower.
