(i) For best performance and lowest fuel consumption 98 RON is recommended, 95 RON can be used for normal driving.

(ii) The Urban fuel consumption figure is based on typical city driving, including starting the car from cold. The Extra Urban figure is based on typical motorway driving and cruising. The Combined figure averages the consumption across both cycles.

(iii) These results do not express or imply any guarantee of the fuel consumption of a particular car as there are inevitable differences between individual cars of the same model. Additionally driving style, traffic conditions, as well as the age and mileage and standard of maintenance will affect a car's fuel consumption.

(iv) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 700 kg.

## Notes

The weight of a vehicle will influence the level of CO<sub>2</sub> emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO<sub>2</sub>. Once a vehicle has been built it will be given its own specific CO<sub>2</sub> emission on which the Vehicle Excise Duty will be charged.

A weighbridge must be used to determine specific weights. Data valid for manual transmission unless specified.

All measurements in mm.

Gt = Geartronic Automatic Transmission.

P/shift = Powershift Automatic.

The Max. output figures are quoted in PS (Pferdestärke), which is the metric equivalent of brake horsepower.
