Equal parts luxury express and sports saloon, when the mood takes you, it can justifiably lay claim to being the perfectly balanced automobile. The information in this price list can help you find the right balance for your Volvo S80 – from the size of the engine to the finishing touches.

V8 AWD

The V8 AWD, 4.4 litre, 60° 'V' configuration delivers outstanding performance and grip producing 315 PS and 440 Nm of torque. This extremely advanced and compact V8 engine is one of the smoothest and cleanest engines of its type and offers effortless performance at any speed. Dual CVVT (Continuously Variable Valve Timing) on both intake and exhaust sides and counter-rotating balancer shafts give an excellent combination of power and refinement. Fuel consumption and CO₂ are also amongst the best for this class of engine.

D5

The D5 2.4 litre, turbocharged, in-line, 5 cylinder, common rail diesel engine delivers very low fuel consumption and CO₂ emissions and excellent performance – producing 185 PS and 400 Nm torque. This extremely advanced diesel engine is made entirely of aluminium giving it a similar weight to a petrol engine. This advanced design combined with third-generation electronic common rail fuel injection, variable blade turbocharger and a diesel particulate filter makes it one of the cleanest and most advanced diesel engines available on the market. A 2.4D version with 163 PS is also available.

- (i) For best performance and lowest fuel consumption 98 RON is recommended. 95 RON can be used for normal driving.
- (ii) The results do not express or imply any guarantee of the fuel consumption of a particular car as there are inevitable differences between individual cars of the same model. Additionally, driving style, traffic conditions, as well as the age and mileage and standard of maintenance will affect a car's fuel consumption.
- (iii) The Urban fuel consumption figure is based on typical city driving, including starting the car from cold. The Extra Urban figure is based on typical motorway driving and cruising. The Combined figure averages the consumption across both cycles.
- (iv) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 700 kg.

Notes

The weight of the vehicle will influence the level of CO₂ emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO₂. Once a vehicle has been built it will be given its own specific CO₂ emission on which Vehicle Excise Duty will be charged.

A weighbridge must be used to determine specific weights.

Data valid for manual transmission unless specified.

Gt = Geartronic Automatic Transmission.

All measurements in mm.

The Max. output figures are quoted in PS (Pferdestärke), which is the metric equivalent of brake horsepower.
