## Thermostat for the cold season

In order to obtain a somewhat higher coolant temperature and thus even better warmth in the car, a thermostat having a higher opening temperature than the normal one is available. This can be obtained from our Spare Parts Department in the usual manner.

This thermostat should only be used during the cold season and must be replaced by the normal one at the end of the winter, otherwise boiling, with resulting inconveniences, may occur during the summer.

	Standard thermostat	Winter thermostat
Opening temperature	75-78°C (167-172°F)	80-83°C (176-181°F)
Fully open	90°C (194°F)	96°C (205°F)
Marked	170	180
Part number	403994	418024
