Tropical fan
and radiator

for

PV 444, 445

Re+ Tropical Fan and Radiator for PV 444, 445

In tropical climates, if complaints are received concerning over-heating of the cooling system on PV 444 and 445, especially when driving in city traffic and mountainous country, a four-bladed cooling fan with Part No. 89226 should be fitted instead of the normal two-bladed fan.

Under extremely hot conditions when over-heating persists even with the four-bladed fan, a special tropical radiator is available with Part No. 252052.

Both these spare parts are available from our Spare Parts Department.
